KETAN JOSHI

Software Developer | MCA Candidate
9773461815 | ketanjoshi2003@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Aspiring software developer pursuing MCA with hands-on experience building full-stack web applications, AI-assisted developer tools, and machine learning projects. Strong foundation in Python, JavaScript, FastAPI, React, and PostgreSQL, with practical experience in authentication, API design, prompt engineering workflows, and modern frontend development.

EDUCATION

Master of Computer Applications (MCA) | Ganpat University, Kherva, Gujarat | 2024 - 2026 (Pursuing)

Bachelor of Computer Applications (BCA) | Ganpat University, Kherva, Gujarat | Completed in 2024

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, C#, Kotlin, SQL
- Frameworks and Libraries: FastAPI, Flask, React, Vite, Express, React Flow, Tailwind CSS
- Databases: PostgreSQL, MongoDB
- Tools and Platforms: GitHub, JWT, Google OAuth, WebSocket, Node.js, Android, Hadoop, HBase
- Core Strengths: API development, prompt engineering, full-stack application design, problem-solving, English communication

SELECTED PROJECTS

PromptOps | React, Vite, FastAPI, PostgreSQL, Gemini, OpenAI, Groq

- Built a full-stack prompt engineering platform that converts structured product requirements into architecture-ready prompts for AI coding workflows.
- Implemented a modular prompt engine, multi-provider LLM failover, chat history, visual prompt chains, JWT auth, Google OAuth, rate limiting, and a credit-based usage system.
- Added backend test coverage for prompt generation logic, free-tier upgrade rules, and credit exhaustion scenarios.

Synapse | JavaScript, Chrome Extension, WebSocket, Node.js

- Built a browser extension and local server that capture AI-generated code from platforms such as ChatGPT, Claude, Gemini, Copilot, Grok, and Poe, then sync changes into local projects.
- Implemented multiple file write modes including overwrite, search/replace diffs, and smart patching, with file-tree matching, reconnect logic, activity logging, dry-run mode, and optional git backup support.

Digital Reading Room (DRR) | React, Vite, Express, MongoDB

- Developed a document-focused web application with authentication, PDF and notes management, analytics and reporting routes, email workflows, and OCR/PDF processing support.

COMS2-2026 Conference Website | React, Vite, Tailwind CSS, Node.js, Express, MongoDB

- Built a responsive full-stack conference website for publishing event information and dynamic content across multiple pages.

ADDITIONAL PROJECTS

- Ketan Portfolio Website: Personal portfolio with dynamic GitHub project loading, responsive layout, typing effects, and scroll animations.
- TrafficTelligence: Machine learning web app for traffic volume prediction using Python, Flask, notebooks, and trained model artifacts.
- NewsApp: React-based news application that fetches and displays articles from external APIs in a responsive interface.
- SRP (Student Result Prediction): Educational Flask app that predicts student marks from study-related input data.

CERTIFICATIONS

- Big Data Analytics Foundation Course - A+ Grade, Ganpat University (Skill India Program)
- IT-ITeS SSC NASSCOM - Experiential Learning Certificate
- Microsoft Get Started with AI Agent Component Certificate
- Kotlin Programming Certificate - Infosys Springboard
- Python Programming (Parts 1, 2 and 3) - Infosys Springboard
- Software Engineering Certificate - Infosys Springboard
- UML Training - Infosys Springboard

LANGUAGES

- English, Gujarati, Hindi
